Connecting to Wifi

Before beginning the process:
- Have your wireless device prepared with a charged battery and the wifi set to on
- Select TEL, pull back on the controller once, select “settings” on the bottom, put a check in the box on “Allow Wifi Sharing”

1. Select: vehicle

2. Select: system settings*
   *May require pushing forward once on the central controller to view

3. Select: Wifi

4. Check: activate

5. Select: connect using security key

6. Stop. Now pick up your wireless device. We will come back to this slide later.
Connecting to Wifi

- Have your phone search for any wifi sources just like you would do at home.
- The MB wifi would be locked and have a strong signal.
- The name of the wifi starts with MB (SSID from the previous page).
- The password is the security key located to the right.
- The password is case sensitive and long!
- When your phone connects you are done.

Troubleshooting:
- Try changing the security key (generate security key, slide 5).
- Try changing the SSID (change SSID, slide 5).
- Try re-booting phone.
